How this meets the marking criteria

Criterion	Marks	Where it is met in this solution
Appropriate field names used (ItemCode, ItemName, Category, Supplier, UnitPrice, QtyInStock, ReorderLevel, DateReceived)	1	Table STOCK, Design View (p. 2): all 8 field names keyed exactly as in Table 1, with no spaces.
Appropriate data types, all present: Short Text for ItemCode, ItemName, Category, Supplier; Currency for UnitPrice; Number for QtyInStock, ReorderLevel; Date/Time for DateReceived	2	p. 2: Data Type column and the field-property summary – Short Text for ItemCode, ItemName, Category, Supplier; Currency for UnitPrice; Number for QtyInStock, ReorderLevel; Date/Time for DateReceived.
Table STOCK populated with all 10 records accurately (1 mark deducted per record with a keying error, minimum 0)	3	Datasheet View (p. 3): all 10 records keyed exactly as in Table 2 (checked value by value against the source data).
Suitable primary key selected (ItemCode)	1	p. 2: key symbol beside ItemCode; Indexed = Yes (No Duplicates).
Simple query Paint_Stock created with criterion Category = "Paint" on the correct field	1	Query Paint_Stock (p. 4): "Paint" in the Criteria row under Category; Show cleared for Category so only the required fields appear.
Complex query Tools_Over50: criterion 1 (Category = "Tools") entered	1	Query Tools_Over50 (p. 5): "Tools" under Category.
Complex query Tools_Over50: criterion 2 (UnitPrice >50) entered	1	p. 5: >50 under UnitPrice (a value only, no currency symbol or units).
Correct use of the two criteria: both placed in the same Criteria row (AND) under the correct fields, with only the required fields shown	2	p. 5: both criteria on the same Criteria row (AND, confirmed in SQL view); Show ticked only for ItemCode, ItemName, Supplier, UnitPrice, QtyInStock; Category used for the criterion only.
Correct results from the queries: Paint_Stock returns 3 records (CB-103, CB-106, CB-110); Tools_Over50 returns 2 records (CB-102, CB-105)	2	p. 4: Paint_Stock returns 3 records (CB-103, CB-106, CB-110); p. 5: Tools_Over50 returns 2 records (CB-102, CB-105).
Report: appropriate fields selected (ItemCode, ItemName, Supplier, UnitPrice, QtyInStock) from Tools_Over50	2	Report Tools Over 50 Report (pp. 6–7): record source Tools_Over50; fields ItemCode, ItemName, Supplier, UnitPrice, QtyInStock; sorted by UnitPrice (descending).
Report: correct, specific title (Power Tools Priced Above US$50.00 – Locked Cabinet Stock, March 2026)	2	p. 7: report header reads "Power Tools Priced Above US$50.00 – Locked Cabinet Stock, March 2026"; name and the label Data Management using Database Management Software in the report footer.
Total	**18**	**Every criterion is met in full.**

A Microsoft Access .accdb file cannot be produced here, so the table design, the datasheet, both queries and the report are supplied in an Excel workbook (one sheet each, with a Design sheet and a Query Design sheet), and this PDF shows every object as Access displays and prints it. To rebuild the database in Access, create the table in Design View from the Design sheet, then import the STOCK sheet (External Data › New Data Source › From File › Excel).

DATABASE DESCRIPTION

The FIVE CAYS STOCK database was created for Five Cays Hardware & Building Supplies Ltd, Leeward Highway, Providenciales, to replace the stock notebook kept by the manager, Mr. Dwayne Richardson, before the hurricane season rush. It has one table, STOCK, which holds the ten stock items with their category, supplier, unit price in US dollars, quantity in stock, reorder level and the date the last delivery was received; ItemCode is the primary key because every item has its own stock code. The simple query Paint_Stock lists the three items in the Paint category, and the complex query Tools_Over50 uses two criteria in the same row (Category "Tools" and UnitPrice >50) to find the two power tools priced above US$50.00. The report Tools Over 50 Report shows those tools from the highest unit price to the lowest so that they can be kept in the locked display cabinet.
