A Microsoft Access .accdb file cannot be produced here, so the table design, the datasheet, both queries and the report are supplied in an Excel workbook (one sheet each, with a Design sheet and a Query Design sheet), and this PDF shows every object as Access displays and prints it. To rebuild the database in Access, create the table in Design View from the Design sheet, then import the EMPLOYEES sheet (External Data › New Data Source › From File › Excel).

DATABASE DESCRIPTION

The SMLR STAFF database was created for the Human Resources Officer of Seven Mile Lagoon Resort Ltd, Grand Cayman, to replace the staff file cards before the annual salary review. Its one table, EMPLOYEES, holds ten employees with their department, job title, date hired, gross monthly salary in CI$, full-time status and work telephone number; EmpID is the primary key because each employee number is unique. The simple query Part_Time_Staff lists the three part-time employees (FullTime = No) for the new scheduling system, and the complex query FB_Salary2500 uses two criteria in the same row (Department “Food and Beverage” and MonthlySalary >=2500) to find the three Food and Beverage staff earning CI$2,500.00 or more. The report FB Salary Review lists these employees in surname order for the General Manager’s salary review.

Department is used only to select the records, so its Show box is cleared. Show is ticked only for EmpID, FirstName, LastName, JobTitle, MonthlySalary.

The report was created with the Report Wizard from the query **FB_Salary2500**, Tabular layout, sorted by **LastName** (ascending). The title was typed in the Report Header; the name and the label were added as labels in the Report Footer, so they print once, after the last record.
