A Microsoft Access .accdb file cannot be produced here, so the table design, the datasheet, both queries and the report are supplied in an Excel workbook (one sheet each, with a Design sheet and a Query Design sheet), and this PDF shows every object as Access displays and prints it. To rebuild the database in Access, create the table in Design View from the Design sheet, then import the BOOKS sheet (External Data › New Data Source › From File › Excel).

DATABASE DESCRIPTION

The BCL CARIBBEAN SHELF database was created for Brades Community Library, Montserrat, to catalogue its Caribbean literature shelf for the Caribbean Classics display for Emancipation Day. Its one table, BOOKS, holds ten books with their author, genre, year of first publication, number of copies, shelf location and whether a copy is on loan; AccessionNo is the primary key because every accession number is unique. The simple query Books_On_Loan lists the four books that are out on loan, and the complex query Novels_Pre1960 uses two criteria in the same row (Genre "Novel" and YearPublished <1960) to find the four novels published before 1960. The report Classics Display Report lists these novels from the oldest to the newest as the display card for the Emancipation Day display.
