A Microsoft Access .accdb file cannot be produced here, so the table design, the datasheet, both queries and the report are supplied in an Excel workbook (one sheet each, with a Design sheet and a Query Design sheet), and this PDF shows every object as Access displays and prints it. To rebuild the database in Access, create the table in Design View from the Design sheet, then import the CDS sheet (External Data › New Data Source › From File › Excel).

DATABASE DESCRIPTION

The ISLAND RHYTHMS CDS database was created for Island Rhythms Community Radio, Grand Bay, Dominica, to catalogue the station's shelf of CDs by local and regional artists. Its one table, CDS, holds nine albums with the artist, genre, year of release, number of tracks, purchase price in EC$, date added and whether the CD is on the shelf; CDCode is the primary key because every catalogue code is unique. The simple query Soca_Albums lists the two soca albums for the Carnival programme, and the complex query Reggae_2020_On uses two criteria in the same row (Genre "Reggae" and YearReleased >=2020) to find the two reggae albums released in or after 2020. The report Sunday Roots Playlist lists these albums from the earliest release to the latest for the Sunday Roots Show.
