A Microsoft Access .accdb file cannot be produced here, so the table design, the datasheet, both queries and the report are supplied in an Excel workbook (one sheet each, with a Design sheet and a Query Design sheet), and this PDF shows every object as Access displays and prints it. To rebuild the database in Access, create the table in Design View from the Design sheet, then import the BOOKINGS sheet (External Data › New Data Source › From File › Excel).

DATABASE DESCRIPTION

The SEAGRAPE TOURS database was created for Seagrape Island Tours N.V., Sint Maarten, so that the office manager, Ms. Gisela Rombley, can see which guests still owe money before they sail. Its one table, BOOKINGS, holds twelve bookings with the lead guest, hotel, tour, tour date, number of guests, amount paid in US$ and whether the full price has been paid; BookingID is the primary key because every booking reference is unique. The simple query Snorkel_Bookings lists the three Snorkel Trip bookings, and the complex query Cruise_Unpaid uses two criteria in the same row (Tour "Catamaran Sunset Cruise" and PaidInFull = No) to find the three cruise bookings that have paid only the 50% deposit. The report Cruise Unpaid Report lists these bookings in tour-date order so that the balances can be collected before each cruise.
