Sample solution

Presenting research on manual and electronic filing

Organisation: EDPM research group – Georgetown offices filing study
Portfolio element: Presentation using Presentation Software
Scenario: ppt-2

Model answer · Teacher's Version

How this meets the marking criteria

Criterion	Marks	Where it is met in this solution
Appropriate, attractive design suited to the topic (Retrospect theme or similar applied consistently to all 10 slides)	1	Retrospect-style design on all 10 slides from one slide master and four layouts: cream background, dark-brown text and an orange accent; the same icon-in-a-circle motif, colours and positions throughout (slides on pp. 6–15; overview on pp. 2–5).
Clear spaces on slides (no more than six bullets, uncluttered); recommended font size (headings 40 pt, body text 24 pt or larger) and style (Arial (one sans-serif font family)); background colour that contrasts with the text – all required	3	Every heading 40 pt bold; body text 28 pt, and 24 pt beside the charts and on the References slide (never below 24 pt); Arial only, including charts; at most 4 bullets per slide with wide margins and free space around icons and charts; strong contrast: dark-brown text on cream.
Appropriate use of animation: Appear entrance on bullets (slides 2, 3, 5 and 9) and Wipe on charts, consistent and not distracting	2	Appear entrance, On Click, one bullet at a time (By Paragraph) on slides 2, 3, 5 and 9; Wipe (From Bottom) entrance, On Click, on each chart (slides 6, 7 and 8). No other effects. Saved in the .pptx (Animation Pane); animations cannot show on paper.
Appropriate use of graphics (relevant images or icons and the charts on slides 6, 7 and 8) and transitions (Push applied to all slides)	2	Relevant icons on slides 1–5 and 9; native pie, column and bar charts made with the chart tool, each with a title and percentage (minutes on the retrieval-time chart) data labels, on slides 6, 7 and 8 (pp. 11, 12 and 13); sources credited on the References slide. Push transition, Duration 01.00, On Mouse Click, on all 10 slides.
Headings on each slide and appropriate sequencing: title, introduction, body (questions, method, findings) and conclusion/references	1	A heading on every slide, in a logical order: title (1), introduction (2), research questions (3), purpose (4), method (5), findings (6–8), recommendations and conclusion (9), references (10).
Speaker notes for each of the 10 slides, in full sentences that expand the slide content	2	Notes typed for all 10 slides (55–71 words each) in full sentences that expand the slide; printed as Notes Pages (pp. 6–15). Handouts, 3 slides per page (pp. 2–5). Every printed page carries the label Presentation using Presentation Software and the candidate's name.
Total	11	Every criterion is met in full.

Files in this pack: ppt-2 - Sample solution.pdf; Filing Systems Presentation.pptx.

Slide numbers and a footer with the candidate's name are on every slide except the title slide. Transitions and animations are saved in the .pptx and play in Slide Show. The icons are copyright-free (Font Awesome Free, CC BY 4.0) and are credited on the References slide. Pages 2–5: handouts (3 slides per page); pages 6–15: Notes Pages. Slide 7 charts retrieval times, so its data labels show minutes rather than percentages; on slide 8 the number of offices is given in each category label beside the percentage labels.

Filing Systems in Georgetown Offices

Manual or Electronic?

[Candidate Name]

Flamboyant Heights College

November 2026

Introduction

- Manual: paper files in cabinets
- Electronic: drives, folders and files
- Records must be retained and secured

Research Questions

- Which filing systems are used?
- How long does retrieval take?
- What problems do offices face?

Purpose of the Research

- Compare the two systems in real offices
- Identify problems and good practice
- Advise offices on improvements

[Candidate Name] 4

Method of Investigation

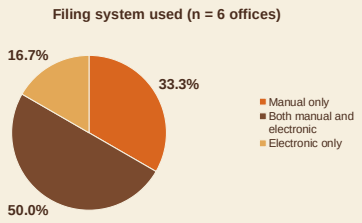

- Qualitative: interviews and observation
- Purposive sample of 6 offices
- 2 law, 2 medical, 2 real estate
- Retrieval of one file timed in each office

[Candidate Name] 5

Filing Systems Used

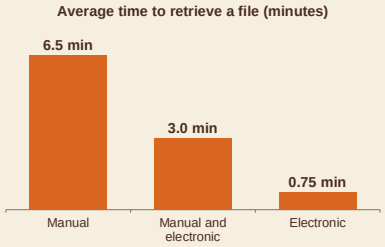

- 3 of 6 offices use both systems
- Only 1 office is fully electronic

[Candidate Name] 6

Time to Retrieve a File

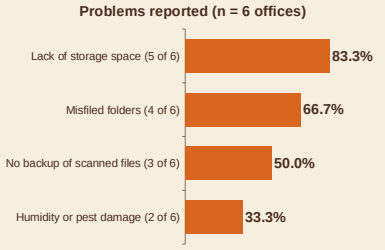

- Manual: 6.5 minutes on average
- Electronic: under 1 minute

[Candidate Name] 7

Problems Reported

- Lack of storage space (5 of 6)
- Misfiled folders (4 of 6)
- No backup of scanned files (3 of 6)

[Candidate Name] 8

Recommendations and Conclusion

- Scan and index older files
- Back up scanned files weekly
- Electronic filing is faster but needs backups

[Candidate Name] 9

Filing Systems in Georgetown Offices

Manual or Electronic?

[Candidate Name]

Flamboyant Heights College

November 2026

Good afternoon, everyone. I am a Form 5 EDPM candidate, and today I am sharing what my group found when we compared manual and electronic filing in six professional offices in Georgetown. Every office must store its records safely and find them again quickly, so the choice of filing system affects how well the office serves its clients.

Introduction

- Manual: paper files in cabinets
- Electronic: drives, folders and files
- Records must be retained and secured

[Candidate Name] 2

Manual filing keeps paper documents in folders inside cabinets, usually arranged alphabetically, numerically or by subject. Electronic filing stores documents as files in folders on drives or in the cloud. Section VIII of the syllabus reminds us that, whichever system is used, records must be kept for the correct retention period and protected from loss, damage and unauthorised access.

Research Questions

- Which filing systems are used?
- How long does retrieval take?
- What problems do offices face?

[Candidate Name] 3

We asked three research questions. The first identifies which filing systems the offices actually use. The second measures how long it takes to retrieve a file, because speed of retrieval is one of the main reasons for choosing a system. The third asks what problems the offices face, so that our recommendations would deal with real difficulties rather than guesses.

Purpose of the Research

- Compare the two systems in real offices
- Identify problems and good practice
- Advise offices on improvements

[Candidate Name] 4

The purpose of the study was to compare the two systems in real working offices, to identify problems and examples of good practice, and to give the office managers practical advice. The managers benefit because they receive a free review of their filing, and we benefit because we see the records management topics from our syllabus in action.

Method of Investigation

- Qualitative: interviews and observation
- Purposive sample of 6 offices
- 2 law, 2 medical, 2 real estate
- Retrieval of one file timed in each office

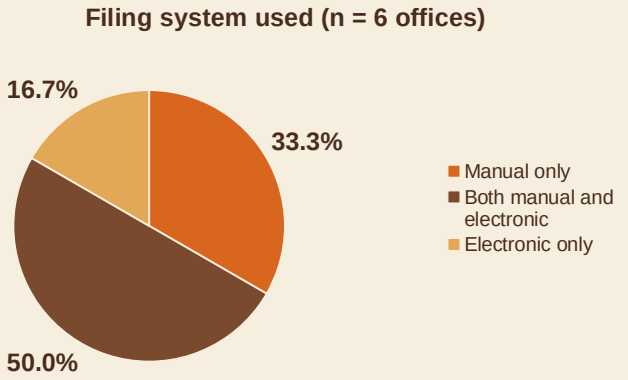

[Candidate Name] 5

We used a qualitative approach because interviews and observation let us see how filing really works. We chose a purposive sample of six offices, two law, two medical and two real estate, so that each type of office was represented. In each office we interviewed the office manager, observed the filing area and timed the retrieval of one requested file.

Filing Systems Used

- 3 of 6 offices use both systems
- Only 1 office is fully electronic

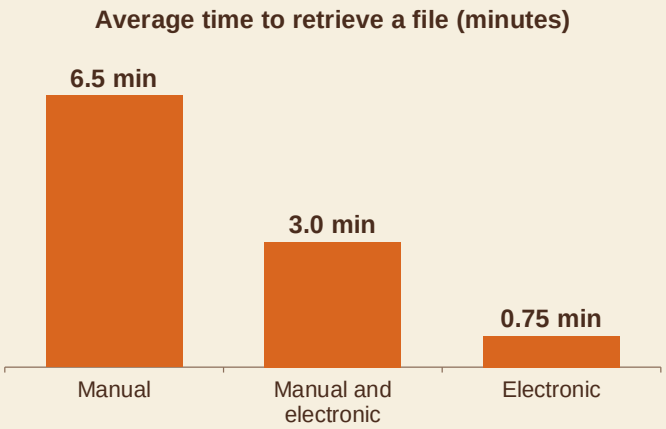

[Candidate Name] 6

This pie chart shows the filing systems used by the six offices. Half of them, three offices, use both manual and electronic filing, two still use manual filing only and just one office is fully electronic. Most offices are moving to electronic filing gradually, scanning new documents while older paper records stay in their cabinets.

Time to Retrieve a File

- Manual: 6.5 minutes on average
- Electronic: under 1 minute

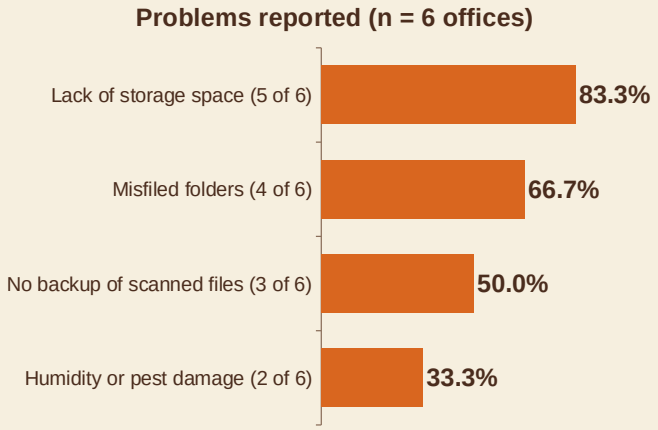

[Candidate Name] 7

This column chart compares the average time taken to retrieve a requested file. Manual offices needed six and a half minutes on average, offices using both systems needed three minutes and the electronic office needed less than one minute. Faster retrieval is one of the main advantages of electronic filing, because clients are served sooner and staff time is saved.

Problems Reported

- Lack of storage space (5 of 6)
- Misfiled folders (4 of 6)
- No backup of scanned files (3 of 6)

[Candidate Name] 8

This bar chart shows the problems reported; an office could report more than one. Five of the six offices lack storage space and four have found misfiled folders, both problems of manual filing. Three offices have no backup of their scanned files, which is a serious risk for electronic filing, and two have had paper records damaged by humidity or pests.

Recommendations and Conclusion

- Scan and index older files
- Back up scanned files weekly
- Electronic filing is faster but needs backups

[Candidate Name] 9

We recommend two improvements. First, offices should scan and index their older paper files so that space is freed and documents can be found quickly. Second, they should back up scanned files every week to an external drive or the cloud. Offices could start with the most-used files and add a backup checklist to the weekly routine. In conclusion, electronic filing is faster, but only when it is properly backed up.

[Candidate Name] 10

Thank you for your attention. Our background information came from the CSEC EDPM syllabus and two EDPM textbooks, which are listed here in APA style together with the source of the icons. I would like to thank the managers and staff of the six offices for allowing us to visit and time their filing. I would now be happy to take your questions.
