Sample solution

Presenting research on health and ergonomics at the office computer

Organisation: EDPM research group – office ergonomics study
Portfolio element: Presentation using Presentation Software
Scenario: ppt-7

Model answer · Teacher's Version

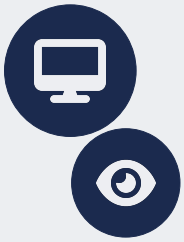

How this meets the marking criteria

Criterion	Marks	Where it is met in this solution
Appropriate, attractive design suited to the topic (Integral theme or similar applied consistently to all 10 slides)	1	Integral-style design on all 10 slides from one slide master and four layouts: light-grey background with dark-blue headings and text; the same icon-in-a-circle motif, colours and positions throughout (slides on pp. 6–15; overview on pp. 2–5).
Clear spaces on slides (no more than six bullets, uncluttered); recommended font size (headings 40 pt, body text 24 pt or larger) and style (Segoe UI (one sans-serif font family)); background colour that contrasts with the text – all required	3	Every heading 40 pt bold; body text 28 pt, and 24 pt beside the charts and on the References slide (never below 24 pt); Segoe UI only, including charts; at most 5 bullets per slide with wide margins and free space around icons and charts; strong contrast: dark-blue text on light grey.
Appropriate use of animation: Fade entrance on bullets (slides 2, 3, 4, 5 and 9) and Zoom on charts, consistent and not distracting	2	Fade entrance, On Click, one bullet at a time (By Paragraph) on slides 2, 3, 4, 5 and 9; Zoom entrance, On Click, on each chart (slides 6, 7 and 8). No other effects. Saved in the .pptx (Animation Pane); animations cannot show on paper.
Appropriate use of graphics (relevant images or icons and the charts on slides 6, 7 and 8) and transitions (Reveal applied to all slides)	2	Relevant icons on slides 1–5 and 9; native bar, pie and column charts made with the chart tool, each with a title and percentage data labels, on slides 6, 7 and 8 (pp. 11, 12 and 13); sources credited on the References slide. Reveal transition, Duration 01.00, On Mouse Click, on all 10 slides.
Headings on each slide and appropriate sequencing: title, introduction, body (questions, method, findings) and conclusion/references	1	A heading on every slide, in a logical order: title (1), introduction (2), research questions (3), purpose (4), method (5), findings (6–8), recommendations and conclusion (9), references (10).
Speaker notes for each of the 10 slides, in full sentences that expand the slide content	2	Notes typed for all 10 slides (49–75 words each) in full sentences that expand the slide; printed as Notes Pages (pp. 6–15). Handouts, 3 slides per page (pp. 2–5). Every printed page carries the label Presentation using Presentation Software and the candidate's name.
Total	11	Every criterion is met in full.

Files in this pack: ppt-7 - Sample solution.pdf; Office Health Presentation.pptx.

Slide numbers and a footer with the candidate's name are on every slide except the title slide. Transitions and animations are saved in the .pptx and play in Slide Show. The icons are copyright-free (Font Awesome Free, CC BY 4.0) and are credited on the References slide. Pages 2–5: handouts (3 slides per page); pages 6–15: Notes Pages. The working for 55.0% (16 + 6 = 22 of 40) is shown in the slide 7 speaker notes.

Sore Necks and Tired Eyes: Health at the Office Computer

EDPM Research Presentation

[Candidate Name]

Sea-Almond Secondary School

April 2026

Introduction

- Office work means long hours at a screen
- Poor set-up can cause pain and strain
- Ergonomics: fitting the workstation to the worker

[Candidate Name] 2

Research Questions

- Which health problems do office workers have?
- How are their workstations set up?
- What habits help them reduce strain?

[Candidate Name] 3

Purpose of the Research

- To measure how common the problems are
- To check workstation set-up
- To recommend practical improvements

[Candidate Name] 4

Method of Investigation

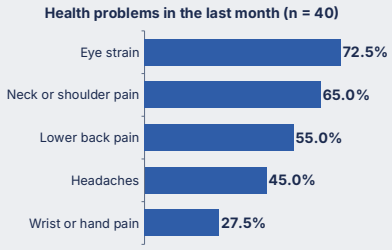

- Quantitative survey and observation checklist
- Stratified sample: 40 workers, 8 workplaces
- 20 private sector, 20 government
- Permission from each workplace
- Data collected 2–13 March 2026

[Candidate Name] 5

Health Problems Reported

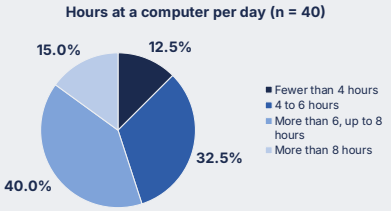

- Eye strain: 72.5%
- Neck or shoulder pain: 65.0%
- Wrist or hand pain: 27.5%

[Candidate Name] 6

Time at the Computer

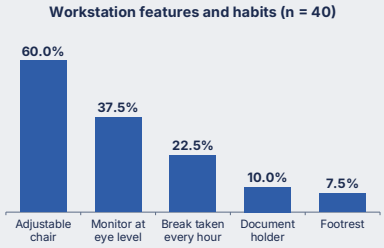

- More than 6 hours a day: 55.0%
- Fewer than 4 hours: 12.5%

[Candidate Name] 7

Workstations and Habits

- Adjustable chair: 60.0%
- Monitor at eye level: 37.5%
- Break every hour: only 22.5%

[Candidate Name] 8

Recommendations and Conclusion

- Raise monitors to eye level
- A five-minute break every hour
- Short ergonomics training for staff
- Simple changes can prevent pain

[Candidate Name] 9

Sore Necks and Tired Eyes: Health at the Office Computer

EDPM Research Presentation

[Candidate Name]

Sea-Almond Secondary School

April 2026

Good morning, everyone. I am a Form 5 EDPM candidate, and on behalf of my group I will present our research into computer-related health problems among office workers in Nassau. Office staff spend most of their day at a screen, so their health affects their comfort, their productivity and the number of sick days that employers must cover.

Introduction

- Office work means long hours at a screen
- Poor set-up can cause pain and strain
- Ergonomics: fitting the workstation to the worker

[Candidate Name] 2

Section I of the syllabus describes both positive and negative effects of computer use on health. Long hours at a poorly arranged workstation can cause eye strain, neck and back pain and wrist injuries. Ergonomics is the study of fitting the workstation to the worker, for example by adjusting the chair, the height of the monitor and the position of the keyboard.

Research Questions

- Which health problems do office workers have?
- How are their workstations set up?
- What habits help them reduce strain?

[Candidate Name] 3

We asked three research questions. Which health problems do office workers have? How are their workstations set up? And what habits help them reduce strain? The answers matter because many ergonomic improvements cost very little, so employers can act on them quickly once they know where the problems are.

Purpose of the Research

- To measure how common the problems are
- To check workstation set-up
- To recommend practical improvements

[Candidate Name] 4

The purpose of the study was to measure how common computer-related health problems are, to check how workstations are set up and to recommend practical improvements. Workers benefit through less pain, managers through fewer absences and higher productivity, and human resources departments through evidence they can use when planning staff training and buying furniture.

Method of Investigation

- Quantitative survey and observation checklist
- Stratified sample: 40 workers, 8 workplaces
- 20 private sector, 20 government
- Permission from each workplace
- Data collected 2–13 March 2026

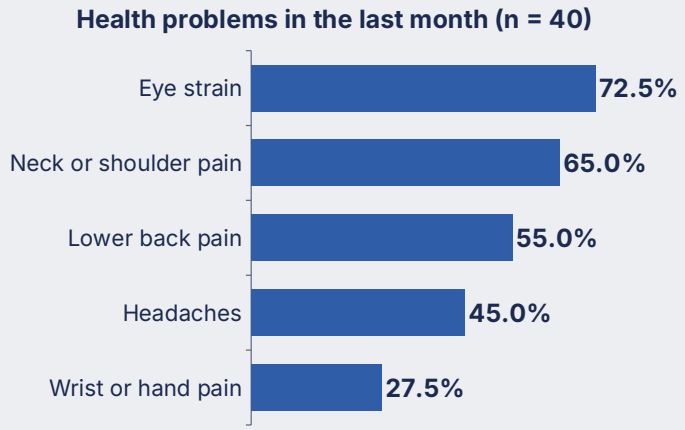

[Candidate Name] 5

We combined a quantitative questionnaire with an observation checklist. We used stratified sampling so that both sectors were represented equally: 20 workers from private businesses and 20 from government offices, across eight workplaces. Each workplace gave permission first. Between 2 and 13 March 2026 we completed the checklist at every desk, noting the chair, the monitor height and any accessories.

Health Problems Reported

- Eye strain: 72.5%
- Neck or shoulder pain: 65.0%
- Wrist or hand pain: 27.5%

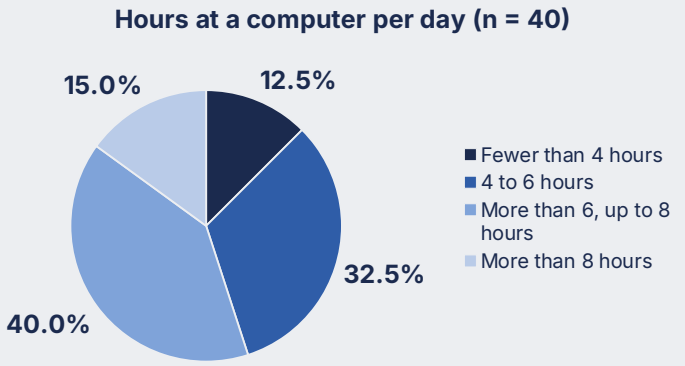

[Candidate Name] 6

This bar chart shows the health problems experienced in the last month; workers could give more than one answer. Eye strain is the most common, reported by 29 of the 40 workers, followed by neck or shoulder pain at 65.0 per cent. These two problems are closely linked to screens that are too low or too close and to long periods without a break.

Time at the Computer

- More than 6 hours a day: 55.0%
- Fewer than 4 hours: 12.5%

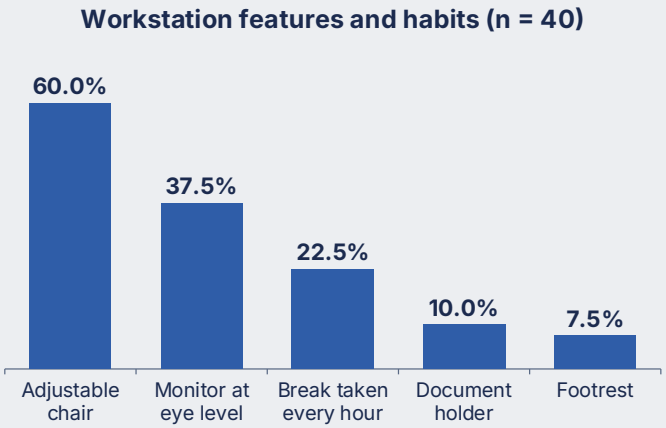

[Candidate Name] 7

Each worker gave one answer, so this pie chart shows hours at the computer on a normal day. The figure of 55.0 per cent for more than six hours combines two slices: 16 workers who spend more than six and up to eight hours, and 6 who spend more than eight. So 16 + 6 = 22, and 22 ÷ 40 × 100 = 55.0 per cent. Small problems build up over a working week.

Workstations and Habits

- Adjustable chair: 60.0%
- Monitor at eye level: 37.5%
- Break every hour: only 22.5%

[Candidate Name] 8

This column chart combines the observation checklist and the questionnaire. Sixty per cent of workers have an adjustable chair, but only 37.5 per cent have a monitor at eye level, and just nine workers, 22.5 per cent, take a break every hour. Very few have a document holder or footrest. These gaps match the high rates of eye strain and neck pain on slide 6.

Recommendations and Conclusion

- Raise monitors to eye level
- A five-minute break every hour
- Short ergonomics training for staff
- Simple changes can prevent pain

[Candidate Name] 9

We recommend two low-cost changes. First, every monitor should be raised to eye level, using a stand or even a ream of paper. Second, workers should take a five-minute break every hour to rest their eyes and stretch. Human resources could run a short ergonomics training session for all staff. In conclusion, simple changes can prevent much of the pain that office workers suffer.

[Candidate Name] 10

Thank you for your attention. Our sources are listed here in APA style: the CSEC EDPM syllabus, the Campbell and Bogle-Graham textbook and the International Labour Organization's Ergonomic checkpoints, together with the credit for the icons. We thank the eight workplaces and forty workers who took part. I would be glad to answer your questions.
