Sample solution

Presenting research on touch-typing and keyboarding speed

Organisation: EDPM research group – keyboarding speed study
Portfolio element: Presentation using Presentation Software
Scenario: ppt-8

Model answer · Teacher's Version

How this meets the marking criteria

Criterion	Marks	Where it is met in this solution
Appropriate, attractive design suited to the topic (Slice theme or similar applied consistently to all 9 slides)	1	Slice-style design on all 9 slides from one slide master and four layouts: dark-navy background with white text and an amber accent; the same icon-in-a-circle motif, colours and positions throughout (slides on pp. 5–13; overview on pp. 2–4).
Clear spaces on slides (no more than six bullets, uncluttered); recommended font size (headings 40 pt, body text 24 pt or larger) and style (Arial (one sans-serif font family)); background colour that contrasts with the text – all required	3	Every heading 40 pt bold; body text 28 pt, and 24 pt beside the charts and on the References slide (never below 24 pt); Arial only, including charts; at most 4 bullets per slide with wide margins and free space around icons and charts; strong contrast: white text on dark navy.
Appropriate use of animation: Fly In (from bottom) entrance on bullets (slides 2, 3, 4 and 8) and Wipe (from left) on charts, consistent and not distracting	2	Fly In (From Bottom) entrance, On Click, one bullet at a time (By Paragraph) on slides 2, 3, 4 and 8; Wipe (From Left) entrance, On Click, on each chart (slides 5, 6 and 7). No other effects. Saved in the .pptx (Animation Pane); animations cannot show on paper.
Appropriate use of graphics (relevant images or icons and the charts on slides 5, 6 and 7) and transitions (Split applied to all slides)	2	Relevant icons on slides 1, 3, 4 and 8, and a home-row keyboard diagram on slide 2; native clustered column, column and pie charts made with the chart tool, each with a title and percentage data labels, on slides 5, 6 and 7 (pp. 9, 10 and 11); sources credited on the References slide. Split transition, Duration 01.00, On Mouse Click, on all 9 slides.
Headings on each slide and appropriate sequencing: title, introduction, body (questions, method, findings) and conclusion/references	1	A heading on every slide, in a logical order: title (1), introduction (2), research questions (3), method (4), findings (5–7), recommendations and conclusion (8), references (9).
Speaker notes for each of the 9 slides, in full sentences that expand the slide content	2	Notes typed for all 9 slides (57–72 words each) in full sentences that expand the slide; printed as Notes Pages (pp. 5–13). Handouts, 3 slides per page (pp. 2–4). Every printed page carries the label Presentation using Presentation Software and the candidate's name.
Total	11	Every criterion is met in full.

Files in this pack: ppt-8 - Sample solution.pdf; Keyboarding Research Presentation.pptx.

Slide numbers and a footer with the candidate's name are on every slide except the title slide. Transitions and animations are saved in the .pptx and play in Slide Show. The icons are copyright-free (Font Awesome Free, CC BY 4.0) and are credited on the References slide. Pages 2–4: handouts (3 slides per page); pages 5–13: Notes Pages. Slide 5 compares percentages because the groups differ in size (24 and 36).

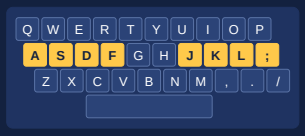

Eyes on the Screen: Touch-typing and Keyboarding Speed

EDPM Research Presentation

[Candidate Name]
Mahoe Grove High School
May 2026

Introduction

- EDPM benchmark: 35 wpm
- Error rate of 5 per cent or less
- Touch-typing: keys found by feel, eyes on the copy

Home row: A S D F J K L ;

Research Questions

- What speed and accuracy do Form 4 students reach?
- Do touch typists do better?
- Where did students learn to type?

Method of Investigation

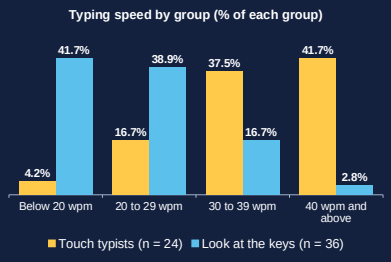

- Five-minute timed test and questionnaire
- Cluster sample: two Form 4 classes, 60 students
- Permission from the principal; parents informed
- Tests held 13–24 April 2026

[Candidate Name] 4

Speed by Group

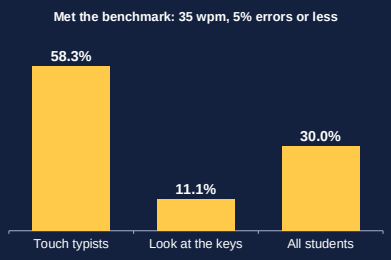

- 40 wpm and above: 41.7% of touch typists
- Below 20 wpm: 41.7% of those who look at the keys

[Candidate Name] 5

Meeting the Benchmark

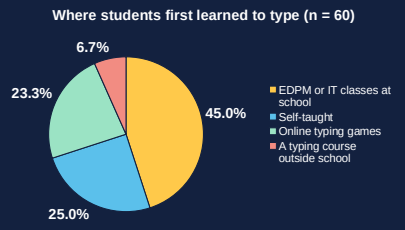

- Touch typists: 58.3%
- Look at the keys: 11.1%
- All students: 30.0%

[Candidate Name] 6

Where Students Learned

- EDPM or IT classes: 45.0%
- Self-taught: 25.0%

[Candidate Name] 7

Recommendations and Conclusion

- Ten minutes of home-row drills each lesson
- Weekly timed tests with a progress chart
- Touch-typing makes the benchmark reachable

[Candidate Name] 8

[Candidate Name] 9

Good afternoon, everyone. I am a Form 5 EDPM candidate, and I am presenting my group's research into the keyboarding speed and accuracy of Form 4 students at our school. Speed and accuracy matter in EDPM, where Paper 02 is a timed practical examination, and in the workplace, where employers expect documents to be produced quickly and without errors.

Introduction

- EDPM benchmark: 35 wpm
- Error rate of 5 per cent or less
- Touch-typing: keys found by feel, eyes on the copy

Home row: A S D F J K L ;

[Candidate Name] 2

The EDPM benchmark is a speed of at least 35 words per minute with an error rate of five per cent or less. Section II of the syllabus covers correct posture, the home row and how speed and accuracy are measured. Touch-typing means finding the keys by feel, with the fingers resting on the home row, A S D F and J K L semicolon, while the eyes stay on the copy.

Research Questions

- What speed and accuracy do Form 4 students reach?
- Do touch typists do better?
- Where did students learn to type?

[Candidate Name] 3

We asked three research questions. What speed and accuracy do Form 4 students reach? Do touch typists do better than students who look at the keys? And where did students learn to type? The answers matter because these students will sit Paper 02 next year, so there is still time to improve their keyboarding before the examination.

Method of Investigation

- Five-minute timed test and questionnaire
- Cluster sample: two Form 4 classes, 60 students
- Permission from the principal; parents informed
- Tests held 13–24 April 2026

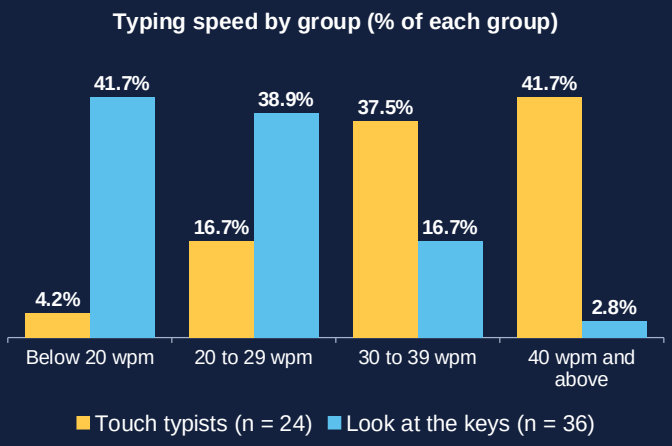

[Candidate Name] 4

Each student typed a set passage for five minutes and completed a short questionnaire. Gross words per minute was the number of five-character words typed divided by five; for net speed, errors were deducted. We used cluster sampling: two whole Form 4 classes, 60 students, were tested, which was practical because each class could sit the test together in the computer lab.

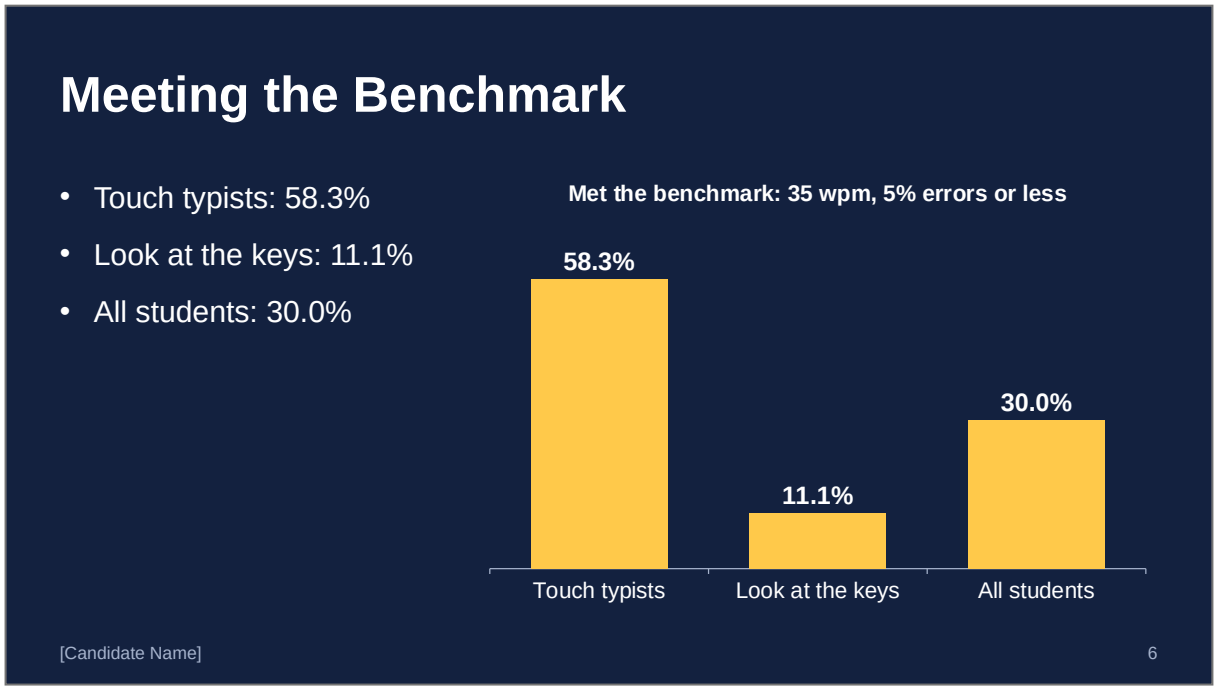

Speed by Group

- 40 wpm and above: 41.7% of touch typists
- Below 20 wpm: 41.7% of those who look at the keys

[Candidate Name] 5

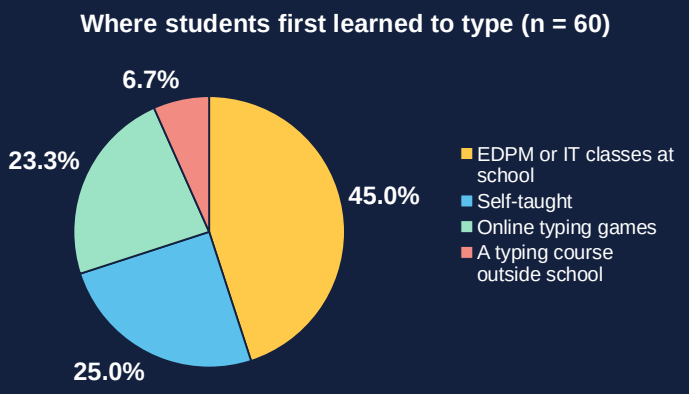

Because the two groups are different sizes, 24 touch typists and 36 students who look at the keys, this chart compares percentages rather than numbers. Most touch typists are in the two top bands, with 41.7 per cent reaching 40 words per minute or more. Most students who look at the keys are in the two lowest bands, and 41.7 per cent of them type below 20 words per minute.

This chart shows the students who met the EDPM benchmark of 35 words per minute with an error rate of five per cent or less. Fourteen of 24 touch typists met it, 58.3 per cent, but only four of 36 students who look at the keys, 11.1 per cent. Overall, 18 of the 60 students, 30.0 per cent, met the benchmark, so touch typists were about five times as likely to succeed.

Where Students Learned

- EDPM or IT classes: 45.0%
- Self-taught: 25.0%

[Candidate Name] 7

Each student gave one answer, so this pie chart shows where students first learned to type. Forty-five per cent learned in EDPM or IT classes and 23.3 per cent through online typing games. A quarter of the students, 15 of 60, taught themselves, often without learning the home row, which may explain many of the low speeds among students who look at the keys.

Recommendations and Conclusion

- Ten minutes of home-row drills each lesson
- Weekly timed tests with a progress chart
- Touch-typing makes the benchmark reachable

[Candidate Name] 8

We recommend two actions for the Business Department. First, every EDPM and IT lesson should begin with ten minutes of home-row drills. Second, students should take a weekly timed test and record their speed and accuracy on a progress chart, so that they can see their improvement. In conclusion, touch-typing makes the 35 words per minute benchmark reachable for every student.

[Candidate Name] 9

Thank you for listening. Our sources are listed here in APA style: the CSEC EDPM syllabus and two EDPM textbooks, along with the credit for the icons and for the keyboard diagram, which I drew myself. Thank you to the principal, the two Form 4 classes and their teachers for their help. I am happy to take any questions now.
