Sample solution

Touch-typing and keyboarding speed among Form 4 students

Organisation: Form 4 students at a secondary school in St. Kitts and Nevis (generic)
Portfolio element: EDPM Research Assignment – Research Paper
Scenario: research-8

Model answer · Teacher's Version

How this meets the marking criteria

Criterion	Marks	Where it is met in this solution
Phase 1 – Selection of topic/title: topic on keyboarding speed and accuracy and the use of touch-typing among Form 4 students is focused and suitably titled	1	Title page; 1.1 (p. 1): focused topic and formal title on keyboarding speed and accuracy and the effect of touch-typing.
Permission letter to the principal of the school: formatting and layout (letterhead, date, inside address, salutation, subject heading, complimentary close, signature block)	2	Appendix A (p. 8): letterhead, date, inside address, salutation, bold subject heading, close and signature block; fully blocked, open punctuation.
Permission letter content: identifies the researchers, the school and the purpose of the research	1	Appendix A (p. 8), paragraph 1: the three researchers, the school and the purpose.
Permission letter content: states what participants will do, the confidentiality of responses and contact details	2	Appendix A (p. 8): each student takes a five-minute timed test and a 10-item questionnaire in one lesson; anonymity, totals only, forms shredded; telephone and e-mail.
Schedule of activities: table with Date, Activity and Comments headings and eight activities listed; relevant sequence with comments/follow-up actions	5	Appendix B (p. 9): Date, Activity, Comments; 12 activities in order, each with a follow-up comment.
Research questions relevant to keyboarding speed and accuracy and the use of touch-typing among Form 4 students and clearly stated	2	1.3 (p. 1): three numbered questions on speed and accuracy achieved, touch-typists compared with others, and how students learned and practise.
Background: general description of keyboarding techniques, touch-typing and how speed and accuracy are measured; rationale highlighting the impact on students (time lost in practical examinations, errors in mailable documents) and on their readiness for the workplace	3	1.4 (p. 1): keyboarding technique, touch-typing and wpm/% error measures described; exam time, unmailable documents and workplace readiness explained.
Background: at least three reputable sources used	2	1.4 (p. 1): four sources cited (Campbell & Bogle-Graham; CXC; LearnFree; Small).
Purpose of research clearly stated, appropriate and relevant to the topic	2	1.5 (p. 1): one clear purpose statement tied to the research questions.
Phase 2 – Method of research identified (mainly quantitative: a timed typing test with a short questionnaire) and justified	2	2.1 (p. 2): mainly quantitative (timed test with a short questionnaire) named and justified.
Sampling procedure identified and described; selection of sample population (60 students in two Form 4 classes) explained	3	2.2 (p. 2): cluster sampling described (two of four Form 4 classes drawn at random, every student tested) and the sample of 60 explained.
Data collection instrument (timed typing test and questionnaire): clearly stated, well-sequenced items that address all research questions	4	2.3 (p. 2); Appendices C and D: standard passage with fixed scoring rules and score sheet, plus a 10-item questionnaire mapped to the questions.
Phase 3 – Findings presented in at least two different forms, each appropriately labelled and titled	4	3.1 (p. 2): six tables, a clustered column chart, a column chart and a pie chart, all numbered and titled.
Tables, charts and graphs show accurate data and use formulae for totals and percentages	2	per-student formulae (gross, net, % error, IF/AND standard) with AVERAGEIF, COUNTIFS, SUM and %, checked by recalculation; Appendix E (p. 12); workbook Summary and Formula view sheets.
Discussion of findings aligned with the research questions with adequate supporting data	4	3.2 (p. 5): one paragraph per research question with counts and percentages.
Analysis/interpretation: relevant generalisations, linkages, connections and comparisons based on the data	3	3.3 (p. 6): compares touch-typists with others on speed, accuracy and the standard; links practice and learning method to speed.
Two recommendations relevant to the findings and one relevant implementation strategy	4	3.4 (p. 6): two numbered recommendations and a who/what/when strategy.
Referencing: accurate APA style, two or more references, in-text citation	6	References (p. 7): four APA 7 entries, hanging indents; citations in 1.4.
Phase 4 – Writing skills: organisation and paragraphing, use of language, spelling and grammar	4	Formal register, focused paragraphs, numbered headings; 953-word body (limit 1000).
Written report layout with four elements such as cover page, acknowledgements, table of contents, references and appendices	4	Cover page, acknowledgements, contents, page numbers, references and appendices.
Total	**60**	**Every criterion is met in full.**

Files in this pack: research-8 - Sample solution.pdf; Research report - Keyboarding speed and touch-typing.docx; Findings data and charts - Keyboarding speed and touch-typing.xlsx.

Phase 3 uses sample findings; every figure comes from workbook formulae, checked by recalculation. Page numbers are the report's own.

BAYLEAF HILL SECONDARY

Basseterre, St. Kitts and Nevis

An Investigation into the Keyboarding Speed and Accuracy of Form 4 Students and the Effect of Touch-Typing

A research paper presented to the Caribbean Examinations Council in partial fulfilment of the requirements for the Caribbean Secondary Education Certificate® (CSEC®) in Electronic Document Preparation and Management (EDPM): School-Based Assessment – Research Assignment

Prepared by

Group member	Candidate number

School	Bayleaf Hill Secondary
Centre code	040017
Territory	St. Kitts and Nevis
Subject teacher	Ms Shernelle Mills
Year of examination	2026
Date submitted	13 March 2026

Acknowledgements

We thank our EDPM teacher, Ms Shernelle Mills, for her guidance, and the Principal of Bayleaf Hill Secondary, Mrs Dionne Phipps, for allowing us to test two Form 4 classes during normal lessons.

We are grateful to the teachers of Forms 4B and 4D for lending us their lessons and the computer room, and to the 60 students who took the test and answered our questionnaire. We also thank our parents for their support.

Phase 1: Planning the Research

1.1 Topic and Title

The EDPM syllabus sets a keyboarding standard of 35 words per minute with no more than 5 per cent error, yet many students still look at the keys and type with two fingers. The group therefore chose the title: *An Investigation into the Keyboarding Speed and Accuracy of Form 4 Students and the Effect of Touch-Typing*.

1.2 Permission and Schedule of Activities

A permission letter was sent to the Principal, with an information note for parents (Appendix A). The schedule of activities (Appendix B) lists 12 activities from 7 January to 13 March 2026.

1.3 Research Questions

1. What keyboarding speed (net words per minute) and accuracy do Form 4 students achieve on a five-minute timed test?
2. Is there a difference in speed and accuracy between students who touch-type and students who look at the keys?
3. Where did students learn to type, and how often do they practise?

1.4 Background

Keyboard mastery means typing with correct posture and technique: fingers rest on the home row (ASDF JKL;), each key is struck by a set finger and the eyes stay on the copy. This touch-typing gives more speed and fewer errors than searching for keys (Campbell & Bogle-Graham, 2012; LearnFree, n.d.). Speed is measured in words per minute, counting five strokes as one word: gross wpm is total words ÷ minutes, net wpm deducts errors, and percentage error is errors ÷ words × 100. The CSEC benchmark is 35 wpm within 5 per cent error (Caribbean Examinations Council [CXC], 2024; Small, 2026).

Slow typists lose time in timed practical examinations, and typing errors make documents unmailable, costing marks. Employers expect fast, accurate keyboarding, so weak skills also reduce students' readiness for the workplace (CXC, 2024).

1.5 Purpose of the Research

This study aims to measure Form 4 students' keyboarding speed and accuracy, compare touch-typists with students who look at the keys and find out how students learned and practise, so that the Business Department can plan keyboarding practice.

Phase 2: Method of Investigation

2.1 Type of Research

Mainly quantitative research was used: a timed test gives scores that can be averaged and compared, and a short questionnaire gives counts that explain the scores. Numbers allow a fair comparison of the two groups.

2.2 Population and Sampling Procedure

The population was Form 4 students taking EDPM or Information Technology. Cluster sampling selects whole groups at random: two of the four Form 4 classes (4B and 4D) were drawn from a hat, and every student in them was tested during normal lessons, giving 60 students (Table 1). Testing whole classes kept conditions identical and did not disrupt other lessons.

2.3 Data Collection Instrument and Procedure

Every student typed the same 292-word passage for exactly five minutes under the same scoring rules (Appendix C), answering Research Questions 1 and 2; the typing method was observed during the test. A 10-item questionnaire (Appendix D) answers Research Question 3. The tests took place on 3 and 5 February 2026, and results were recorded by student number, not by name.

Phase 3: Presentation and Discussion of Findings

3.1 Presentation of Findings

Scores were entered in Microsoft Excel, where formulae calculated each student's gross wpm, net wpm, percentage error and whether the standard was met; AVERAGEIF, COUNTIF, COUNTIFS, SUM and percentage formulae produced the tables (Appendix E).

Table 1

Respondents by Class and Typing Method

Class	Touch-typists	Look at the keys	Total
4B	10	20	30
4D	8	22	30
Total	**18**	**42**	**60**

Note. Counts by COUNTIFS (class and method); Total = touch-typists + others; column totals by SUM.

Table 2

Average Results of the Five-Minute Timed Test, by Typing Method

Group	Students	Average gross wpm	Average errors	Average net wpm	Average % error	Met the standard	% who met it
Touch-typists	18	39.9	6.4	38.7	3.3%	12	66.7%
Look at the keys	42	22.9	7.4	21.4	6.6%	2	4.8%
All students	60	28.0	7.1	26.6	5.6%	14	23.3%

Note. Averages by AVERAGEIF (AVERAGE for all students) on the formula columns; standard = 35 net wpm or more with 5% error or less; % = met ÷ students.

Table 3

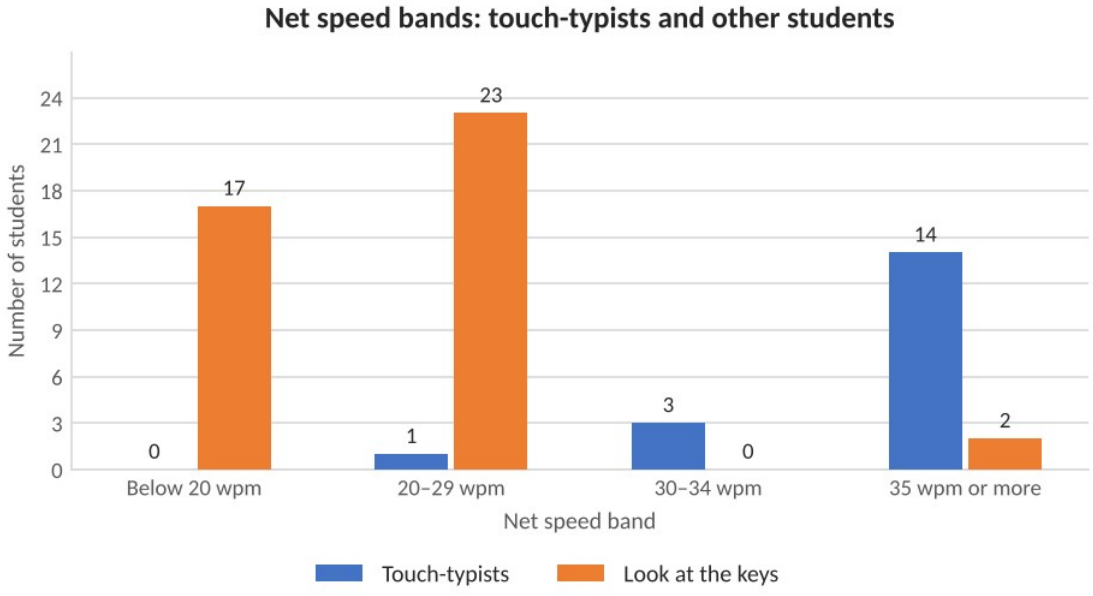

Net Speed Bands by Typing Method

Net speed band	Touch-typists	Look at the keys	All students	% of all students
Below 20 wpm	0	17	17	28.3%
20–29 wpm	1	23	24	40.0%
30–34 wpm	3	0	3	5.0%
35 wpm or more	14	2	16	26.7%
Total	**18**	**42**	**60**	**100.0%**

Note. Counts by COUNTIFS with criteria such as ">=30" and "<35" on the net wpm column.

Figure 1

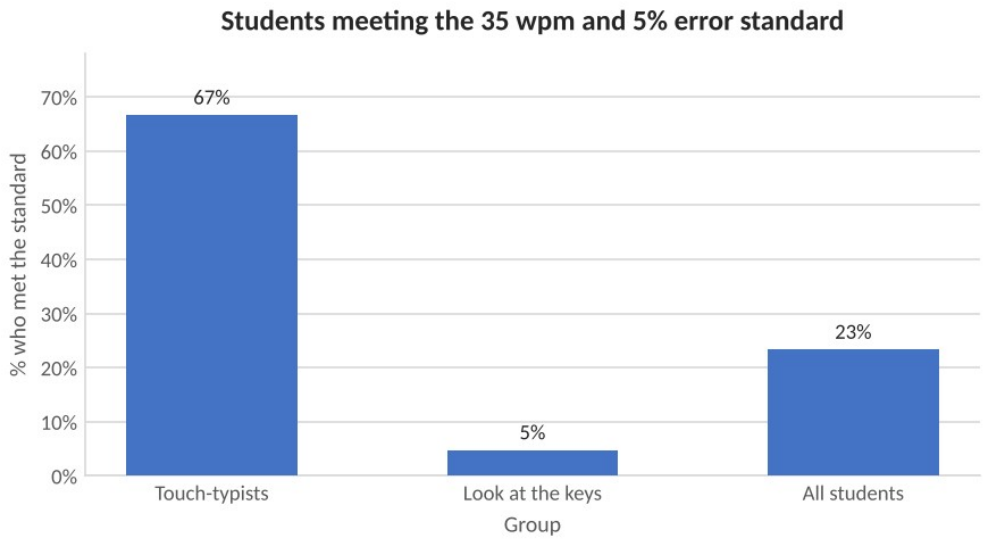

Net Speed Bands of Touch-Typists and Students Who Look at the Keys

Note. Number of students in each band (from Table 3).

Figure 2

Percentage of Students Meeting the 35 wpm and 5% Error Standard

Note. From the last column of Table 2.

Table 4

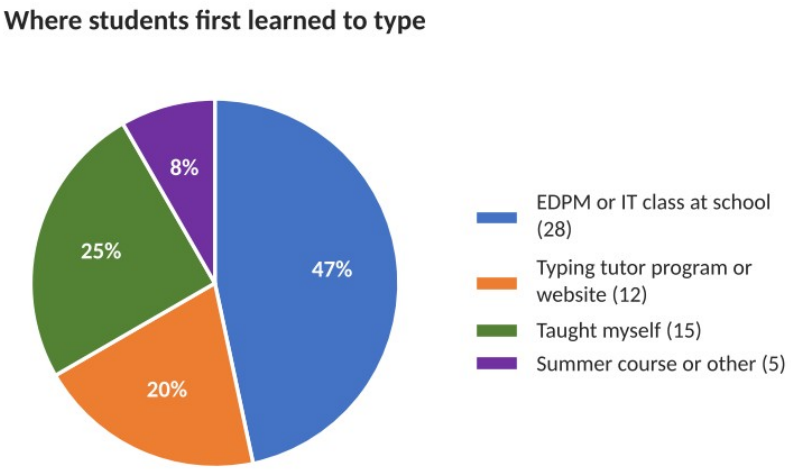

Where Students First Learned to Type (Item 5)

Where first learned	Touch-typists	Look at the keys	All students	% of all students
EDPM or IT class at school	8	20	28	46.7%
Typing tutor program or website	7	5	12	20.0%
Taught myself	2	13	15	25.0%
Summer course or other	1	4	5	8.3%
Total	**18**	**42**	**60**	**100.0%**

Note. n = 60. Counts calculated with COUNTIF and percentages with =count/n in Excel (see Appendix E).

Figure 3

Where Students First Learned to Type

Note. Share of all 60 students (from Table 4).

Table 5

How Often Students Practise, with Average Net Speed (Item 6)

How often	Students	Touch-typists	% touch-typists	Average net wpm
Daily	6	5	83.3%	41.5
A few times a week	14	8	57.1%	34.7
Weekly	16	4	25.0%	25.2
Rarely or never	24	1	4.2%	19.0

Note. Counts by COUNTIF and COUNTIFS; average by AVERAGEIF on the net wpm column.

Table 6

Home Computers, Home-Row Knowledge, Posture and Confidence (Items 3, 8–10)

Finding	Students	% of students
Have a computer at home	41	68.3%
Know the home-row keys	35	58.3%
Always use correct posture	14	23.3%
Believe they will reach the standard	19	31.7%

Note. n = 60. Counts calculated with COUNTIF and percentages with =count/n in Excel (see Appendix E).

3.2 Discussion of Findings

Research Question 1. The average net speed of all 60 students was 26.6 wpm with 5.6% error, and only 14 students (23.3%) met the standard (Table 2). Most students (41) typed below 30 net wpm (Table 3).

Research Question 2. Touch-typists performed far better. Their average net speed was 38.7 wpm against 21.4 wpm for students who look at the keys, with 3.3% error against 6.6%. In

all, 12 of the 18 touch-typists (66.7%) met the standard, compared with 2 of 42 (4.8%) (Figure 1, Figure 2).

Research Question 3. Most students first learned at school (28), followed by teaching themselves (15) and typing tutor programs (12) (Table 4, Figure 3). Practice is irregular: 24 students rarely or never practise and only 6 practise daily (Table 5).

3.3 Analysis and Interpretation

Touch-typing is clearly linked to both speed and accuracy, supporting the view that keeping the eyes on the copy saves time and reduces errors. Practice matters too: average net speed falls from 41.5 wpm for daily practice to 19.0 wpm for rare practice, and touch-typists make up 83.3% of daily practisers but only 4.2% of those who rarely practise. Typing tutor programs produced 7 touch-typists out of 12 learners, a better rate than any other source. Although 35 students know the home row, few use it without looking, so knowledge alone is not enough without regular, structured practice.

3.4 Recommendations and Implementation Strategy

1. The Business Department should timetable two 15-minute touch-typing sessions a week for every Form 4 class, using a typing tutor program and a monthly five-minute timed test.
2. Students who look at the keys should be retrained on the home row and correct posture, using keyboard covers until they can type without looking.

Implementation strategy: From 20 April 2026 the Head of the Business Department will add the two weekly sessions to the computer-room timetable. EDPM and IT teachers will give a timed test on the last Friday of each month, record net wpm and percentage error in a shared spreadsheet and review progress in July 2026.

Conclusion

Few Form 4 students meet the 35 wpm and 5% standard, but touch-typists are much faster and more accurate than students who look at the keys, and regular practice is linked to higher speeds. Structured touch-typing practice and regular timed tests should help more students reach the standard before the examination.

Appendix A: Permission Letter

BAYLEAF HILL SECONDARY
Cayon Street, Basseterre, St. Kitts
Telephone: (869) 555-0139 | E-mail: office@bayleafhill.edu.kn

13 January 2026

Mrs Dionne Phipps
Principal
Bayleaf Hill Secondary
Cayon Street
Basseterre
ST KITTS

Dear Mrs Phipps

REQUEST FOR PERMISSION TO GIVE A TIMED TYPING TEST TO TWO FORM 4 CLASSES

We are Kezia Liburd, Jahiem Browne and Tishana Hendrickson, Form 5 students of Bayleaf Hill Secondary. For our CSEC Electronic Document Preparation and Management (EDPM) School-Based Assessment we are investigating the keyboarding speed and accuracy of Form 4 students and the effect of touch-typing.

The purpose of the study is to measure students' speed and accuracy, compare touch-typists with students who look at the keys and find out where and how students learned to type, so that the Business Department can plan keyboarding practice.

We request permission to select two of the four Form 4 classes at random and, during one normal lesson each in the computer room between 2 and 6 February 2026, to give every student a five-minute timed typing test on the same passage, followed by a 10-item questionnaire (about ten minutes). An information note will be sent to parents beforehand.

Taking part is voluntary and will not affect any student's marks. Results will be recorded by student number, reported only by group and never by name, and the score sheets will be shredded after our report has been marked.

If you have any questions, please contact me at (869) 555-0172 or kezia.liburd@bayleafhill.edu.kn, or our EDPM teacher, Ms Shernelle Mills, at the school telephone number above. Copies of the test, score sheet, questionnaire and parents' note are enclosed. Thank you for considering our request.

Yours sincerely

Kezia Liburd
Group Leader, Form 5 EDPM Research Group

Group members: Jahiem Browne and Tishana Hendrickson

c Ms Shernelle Mills, EDPM Teacher

Appendix B: Schedule of Activities (Workplan)

The group followed this schedule of activities from January to March 2026.

Date	Activity	Comments / follow-up action
7 Jan 2026	Formed the group, chose the topic and agreed the title	Teacher approved the title on 9 January.
8–12 Jan 2026	Read background sources; wrote the research questions	Recorded full APA details of each source.
13 Jan 2026	Delivered the permission letter to the Principal	Permission granted on 16 January.
14–20 Jan 2026	Prepared the test passage, score sheet, questionnaire and parents' note	Teacher checked the scoring rules and the passage length.
21 Jan 2026	Drew two of the four Form 4 classes at random	4B and 4D drawn; parents' note sent home on 22 January.
26 Jan 2026	Pilot-tested the test and questionnaire with five Form 5 volunteers	Agreed how to count errors (one per word) before testing.
3 and 5 Feb 2026	Gave the timed test and questionnaire to 4B and 4D	Same passage, same 5 minutes, same rules; 60 students tested.
9–13 Feb 2026	Scored the tests; entered data and formulae in Excel	Each score checked by a second member.
16–20 Feb 2026	Wrote the discussion, analysis and recommendations	Reported results by group, not by name.
23 Feb–4 Mar 2026	Wrote the first draft; teacher feedback	Added the speed-band chart.
9–11 Mar 2026	Final edit; references, contents page and appendices	Checked APA style and word count.
13 Mar 2026	Submitted the report	Summary given to the Head of the Business Department.

Appendix C: Timed Typing Test and Score Sheet

Five-Minute Timed Typing Test

Instructions for the tester. Seat each student at a computer with the passage on a copy holder. Start and stop everyone together after exactly five minutes. Students who finish start the passage again. While students type, record whether each one touch-types (eyes on the copy) or looks at the keys. Use the same passage, time and scoring rules for every student.

Test passage (292 words; 1,671 strokes including spaces)

Every year the students of our school hold a fair to raise money for new books and computers. Planning begins early in the first term, when each form chooses a stall and elects a small committee. Some forms sell local food such as coconut tarts, fish cakes and sorrel, while others run games, a raffle or a book exchange. The committees must prepare a budget, write letters to local businesses asking for donations and design posters that will be displayed around the town. Because so many documents are needed, students who can type quickly and accurately are always in demand. A letter that is full of errors gives a poor picture of the school, and a poster that is late cannot attract visitors. On the morning of the fair, parents help to set up tables and tents on the playing field, and the steel band practises in the corner of the yard. By midday the field is crowded with families, former students and visitors from nearby villages. The treasurer of each stall records every sale in a notebook, and the totals are later entered in a spreadsheet so that the profit can be calculated. After the fair, the committees write thank-you letters to every sponsor and prepare a short report for the principal. Last year the fair raised enough money to buy ten new keyboards for the computer room. Students now practise their typing on these keyboards during lunch time, and many have improved their speed. Teachers remind them that good posture, eyes on the copy and fingers resting lightly on the home row are the secrets of fast, accurate typing. With steady practice, a student who once typed twenty words a minute can reach forty words a minute before the examination.

Scoring rules. Total words typed = strokes ÷ 5. Count one error for each word containing any mistake (wrong, missing or extra letters, spacing or punctuation). Gross wpm = total words ÷ 5. Net wpm = (total words − errors) ÷ 5. Percentage error = errors ÷ total words × 100. Standard met = net wpm of 35 or more with 5% error or less.

Student no.	Class	Method (touch / keys)	Total words	Errors	Gross wpm	Net wpm	% error	Standard met?

Appendix D: Questionnaire

Questionnaire: How Did You Learn to Type?

Please complete this questionnaire after the timed test. Write only your student number, not your name. Results will be reported by group only. Tick ONE box for each question.

Student number (from your test sheet): _____

1. Which class are you in?
   ☐ 4B ☐ 4D

2. Which subject do you take?
   ☐ EDPM ☐ Information Technology ☐ Both

3. Do you have a computer or laptop at home?
   ☐ Yes ☐ No

4. How do you usually type? (The observer records this during the test; please confirm.)
   ☐ I touch-type with my eyes on the copy ☐ I look at the keys

5. Where did you first learn to type?
   ☐ EDPM or IT class at school ☐ Taught myself
   ☐ Typing tutor program or website ☐ Summer course or other

6. How often do you practise typing?
   ☐ Daily ☐ Weekly
   ☐ A few times a week ☐ Rarely or never

7. How long is a typical practice session?
   ☐ Less than 15 minutes ☐ More than 30 minutes
   ☐ 15–30 minutes ☐ I do not practise

8. Do you know which keys are on the home row?
   ☐ Yes ☐ No ☐ Not sure

9. Do you sit with your back straight, feet flat and wrists raised when you type?
   ☐ Always ☐ Sometimes ☐ Never

10. Do you think you will reach 35 wpm with no more than 5% error by the examination?
    ☐ Yes ☐ No ☐ Not sure

Thank you. Hand this form to the tester with your test sheet.

Appendix E: Spreadsheet Formulae

The findings were entered in Microsoft Excel (sheet *Responses*, one row per student) and summarised on the *Summary* sheet. Every count, total, average and percentage in the tables and charts is calculated by a formula; the main formulae are listed below (cell references are on the *Summary* sheet).

Table	Column / item	Cell	Formula
–	Number of students	B3	=COUNTA(Responses!$A$2:$A$61)
Table 1	Touch-typists (first row, then copied down)	B7	=COUNTIFS(Responses!$B$2:$B$61,"4B",Responses!$E$2:$E$61,"Touch-types")
Table 1	Look at the keys (first row, then copied down)	C7	=COUNTIFS(Responses!$B$2:$B$61,"4B",Responses!$E$2:$E$61,"Looks at the keys")
Table 1	Total (first row, then copied down)	D7	=B7+C7
Table 1	Touch-typists (total row)	B9	=SUM(B7:B8)
Table 1	Look at the keys (total row)	C9	=SUM(C7:C8)
Table 1	Total (total row)	D9	=SUM(D7:D8)
Table 2	Students (first row, then copied down)	B13	=COUNTIF(Responses!$E$2:$E$61,"Touch-types")
Table 2	Average gross wpm (first row, then copied down)	C13	=AVERAGEIF(Responses!$E$2:$E$61,"Touch-types",Responses!$N$2:$N$61)
Table 2	Average errors (first row, then copied down)	D13	=AVERAGEIF(Responses!$E$2:$E$61,"Touch-types",Responses!$M$2:$M$61)
Table 2	Average net wpm (first row, then copied down)	E13	=AVERAGEIF(Responses!$E$2:$E$61,"Touch-types",Responses!$O$2:$O$61)
Table 2	Average % error (first row, then copied down)	F13	=AVERAGEIF(Responses!$E$2:$E$61,"Touch-types",Responses!$P$2:$P$61)
Table 2	Met the standard (first row, then copied down)	G13	=COUNTIFS(Responses!$E$2:$E$61,"Touch-types",Responses!$Q$2:$Q$61,"Yes")
Table 2	% who met it (first row, then copied down)	H13	=G13/B13
Table 2	Students (row 3)	B15	=Summary!$B$3
Table 2	Met the standard (row 3)	G15	=COUNTIF(Responses!$Q$2:$Q$61,"Yes")
Table 3	Touch-typists (first row, then copied down)	B20	=COUNTIFS(Responses!$O$2:$O$61,"<20",Responses!$E$2:$E$61,"Touch-types")
