Hotel room-nights and occupancy by season

South Coast Hospitality Association

Ruled Tabulation using Spreadsheet Software

In this download: Hotel Occupancy.xlsx · ruled-4 - Sample solution.pdf

The **Table** sheet prints on one A4 landscape page, centred horizontally, with the candidate's name and the label in the footer. The **Formulas** sheet is the formula view (Show Formulas, with gridlines and row and column headings) and prints on page 2.

How this meets the marking criteria

Criterion	Marks	Where it is met in this answer
Selection of appropriate software tool	1 KC	Keyed into Excel worksheet cells on the sheet **Table** (no text boxes or Word table); the main heading is merged and centred across A1:G1.
Present slanted headings	1 APP	The columnar headings in B3:G3 are set at an oblique angle of 45° (Format Cells › Alignment › Orientation) and stay readable; group headings merged and centred: High Season over B2:D2; Low Season over E2:G2.
Present harmonious colour scheme	1 APP	A harmonious scheme of two tints of one blue distinguish the seasons – High Season headings in deep blue (#1F618D) over a pale tint, Low Season in a lighter blue (#5499C7) over a paler tint; the ALL PROPERTIES row is shaded the same mid tint (#A9CCE3) right across.
Present accurate information	1 APP	All 6 rows keyed exactly and sorted A to Z (Carlisle Bay Harbour Hotel first, Worthing Beach Suites last), ALL PROPERTIES kept last; High Season Occupancy % by =C4/B4; Low Season Occupancy % by =F4/E4; ALL PROPERTIES row by =SUM(...) on every numeric column. Every figure was checked against a LibreOffice recalculation: room-nights keyed in exactly; Occupancy % correct to one decimal place (overall: High 86.3%, Low 53.1%); properties sorted A to Z.
Total	**4**	Every criterion is visibly met; all figures were checked by recalculation.
